1. Definición del Objetivo

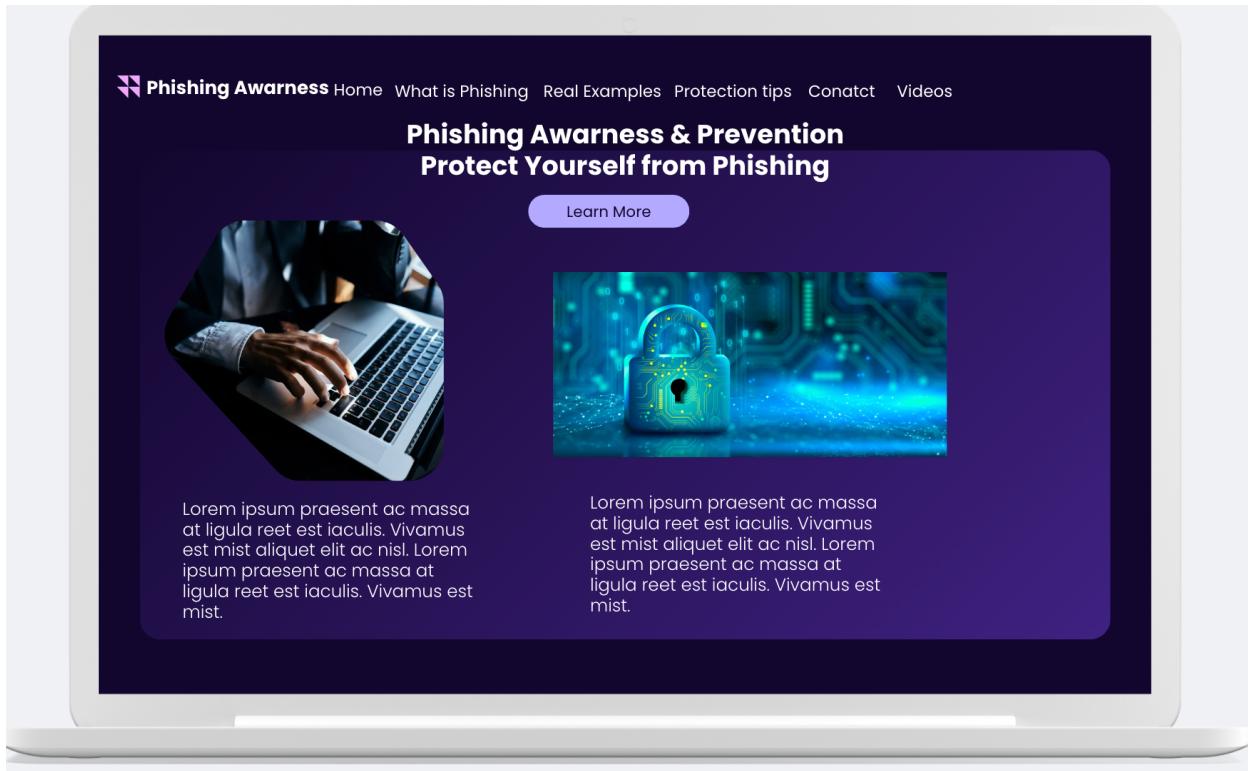

El objetivo de este sitio web es educar a los usuarios sobre los peligros del phishing, proporcionando información sobre cómo identificar ataques, ejemplos reales y consejos para protegerse. La idea es que este sitio web tenga una apariencia atractiva y moderna para los usuarios. En donde se usan colores neón, tema oscuro y colores que destacan mucho.

2. Identificación de los Usuarios

El sitio está dirigido a:

- Usuarios que usan internet, los cuales desean aprender de manera simple y clara lo que es el phishing
- Principiantes en el mundo de la ciberseguridad los cuales quieran aprender qué es el phishing y porque es de los ataques más simples pero devastadores
- Empresas y profesionales que buscan medidas de protección contra el phishing.

3. Mockup del Sitio Web

Common Types of Phishing Attacks

- Email Phishing
- Spear Phishing
- Smishing (SMS Phishing)
- Vishing (Voice Phishing)

This is the most common form of phishing, where attackers send fraudulent emails that appear to be from legitimate companies, tricking users into clicking malicious links or sharing sensitive data.

What is Phishing?

Phishing is a type of cyber attack where hackers impersonate legitimate organizations to deceive individuals into revealing sensitive information, such as passwords, credit card details, or personal data. These attacks commonly occur through emails, fake websites, or messages designed to look authentic. Understanding how phishing works and recognizing warning signs is crucial for staying protected online.

Phishing is a technique where malicious actors trick individuals into providing confidential information by posing as trustworthy sources.

These attacks can occur through emails, text messages, phone calls, or fake websites. Hackers often create urgency or fear to manipulate victims into providing sensitive data.

Real Phishing Examples

Learn from real cases of phishing attacks and how to spot them.

One of the most common phishing scams is the **fake bank alert**. Attackers send emails pretending to be from a bank, urging the recipient to verify their account due to "suspicious activity." The email includes a fake login page that captures the user's credentials. Always check the sender's email address and avoid clicking on links from unknown sources.

Another example is the **job offer scam**. Cybercriminals post fake job listings on popular websites, promising high salaries and benefits to lure job seekers. Once applicants provide personal information or pay a fee, the scammers disappear. Be cautious of job offers that sound too good to be true and research the company before sharing any details.
